History of Fiber Cable

Long History of Successful Deployment

Over 35 years of successful deployment provides assurance that the technology is solid, reliable ...

History of 30 years

1980
Ribbon Slotted Core Cable
Mass Ribbon Fusion Splicer

1990
1000-Fiber Ribbon “Multi” Slotted Core Cable
1000-Fiber Ribbon “Single” Slotted Core Cable
ROL stranded core

2000
Small diameter and Light weight
1000-Fiber Ribbon Slotted Core Cable
Enhanced Peelable Ribbon
Easy Accessibility Cable

2010
Primarily 4, 8, 12 fiber ribbons
23mm
28mm
40mm
Progress in Workability
Mid-span access
Single fiber operation
Smaller diameter
High fiber count
Ribbon Fiber & Identification

Easy Identification

Standard color codes and print string on ribbon make identification easy. Many more fibers installed in less time, terminated faster and proven reliability show why ribbon growth has been explosive.

</table>
Core concentricity offset 0.8 microns (SEL = 0.4)

Mode field diameter 8.6-9.2 microns, +/- 0.6 microns

Cladding diameter 125 microns, +/- 0.5

Bend Insensitive Fibers are typically at the low end of the mode field measurement, 8.6 microns, or better.

Uniformity of Fiber in Ribbon

Ribbons manufactured with fiber which adhere to the standards provide compatibility...
The core concentricity offset allows ribbon to be spliced uniformly

Ribbon Competitive Advantage

- Fibers separate easily, cleanly - improves productivity, no additional cleaning of fibers necessary
- Provides for access to individual fibers easily
- Various fiber counts available – Flexibility
- Supports 1G/10G with 12F based ribbons, 40G/100G/400G with 8F based ribbons

Easy Peel Technology
The most user friendly ribbon is craft friendly.... Strips faster and easier for speed of termination
INDEX

2. Advantages of Standard Fiber Optic Ribbon Based Cables
3. Advantages of Splicing Fiber Optic Ribbon
4. Connectivity Options for Splicing Fiber Optic Ribbon
5. 2nd Generation Fiber Optic Ribbon
6. Ultra High Fiber Count Cable Overview & Advantages
7. Conclusion – Review of Benefits
Advantages of Standard Fiber Optic Ribbon Cable

Greater Fiber Packing Density

For indoor rated cables with fiber counts of 144 or greater the fiber packing density with fiber optic ribbon based central tube cables exceeds that of typical loose tube construction...

216ct Ribbon Central Tube Cable

144ct 250um Loose Tube Cable

~0.61in (15.6mm)

~0.625in. (15.9mm)

At these counts and higher the smaller OD ribbon based cable allows for better utilization of cable trays and cable management.

Bicsi
Advantages of Standard Fiber Optic Ribbon Cable

Greater Fiber Packing Density Cable OD

Comparing ribbon cables to loose tube or tight buffer cable constructions the fiber count per cable OD is significantly greater for the ribbon based central tube cable construction...

<table>
<thead>
<tr>
<th>Cable Type</th>
<th>Fiber Count</th>
<th>OD (Approx.)</th>
</tr>
</thead>
<tbody>
<tr>
<td>216ct Ribbon Central Tube Cable</td>
<td>216</td>
<td>~0.61in. (15.6m)</td>
</tr>
<tr>
<td>144ct 250um Loose Tube Cable</td>
<td>144</td>
<td>~0.625 in. (15.9m)</td>
</tr>
<tr>
<td>144ct 900um Tight Buffer Cable</td>
<td>144</td>
<td>~0.93in. (23.6m)</td>
</tr>
</tbody>
</table>

At these counts and higher the smaller OD ribbon based cable allows for better utilization of cable trays and cable management.
Advantages of Standard Fiber Optic Ribbon Cable

Greater Fiber Packing Density Bend Radius

In this example, due to the greater fiber packing density the 216ct ribbon central tube cable has the smallest bend radius compared to the 144ct loose tube and tight buffer constructions.

<table>
<thead>
<tr>
<th>Cable Type</th>
<th>MBR-I (mm)</th>
<th>MBR-O (mm)</th>
</tr>
</thead>
<tbody>
<tr>
<td>216ct Ribbon Central Tube</td>
<td>9.0</td>
<td>6.1</td>
</tr>
<tr>
<td>144ct 250um Loose Tube</td>
<td>9.4</td>
<td>6.3</td>
</tr>
<tr>
<td>144ct 900um Tight Buffer</td>
<td>13.9</td>
<td>9.3</td>
</tr>
</tbody>
</table>

MBR-I = Minimum Bend Radius during Installation / MBR-O = Operational/After Installation

At these and higher fiber counts, the ribbon central tube construction installation and operation in terms of handling and routing is the same or better than that of the loose tube and tight buffer constructions.

7. Conclusion – Review of Benefits
Advantages of Splicing Fiber Optic Ribbon

The difference in splicing ribbon fiber versus single fiber is the thermal jacket remover versus using the jacket stripping tool... AND you are doing 12 fibers at a time....
Ribbon based cable constructions offer multiple advantages over loose tube and tight buffer cable constructions in the area of terminations. Advantages exist in both time and costs...
Advantages of Splicing Fiber Optic Ribbon

Termination Advantages

Typical splicing time for inline fusion splicing either two single 250um coated fibers or two 12ct ribbons is about the same, ~120sec

(This is an average time which may be less or more depending on technician experience and/or technicians per fusion splicing unit)

~120sec

*Advancements in heater technology & dual heater splicers equalize protection time for single and ribbon splicing
**Advantages of Splicing Fiber Optic Ribbon**

<table>
<thead>
<tr>
<th>Termination Advantages</th>
<th>How about quality of splice between core alignment and ribbon splicing?</th>
</tr>

</tr>
</tbody>
</table>

While the core alignment fusion splicer yields lower loss splices, the ribbon based splicer yields splice losses well inside the typical allowable loss per splice point.

*Splice loss performance dependent on specific splicer manufacturers and models*
Advantages of Splicing Fiber Optic Ribbon

Termination Advantages

...so, at ~120sec per splice for either a single fiber or 12ct ribbon splice the following comparison is true for in-line splicing a 144ct loose tube and 144ct ribbon based cable...

Single Fiber Fusion Splice

144 single splices @ 120 sec per splice = 17,280 sec
Or 288 minutes
Or 4.8 hours

144 fibers = 12 ribbons @ 120 sec per splice = 1,440 sec
Or 24 minutes
Or Half an Hour!

12ct Ribbon Fusion Splice

Splicing 12ct ribbon in this scenario is 92% more efficient than splicing single fiber
Advantages of Splicing Fiber Optic Ribbon

Termination Advantages

Not only is splicing 12ct ribbon significantly more efficient in regards to time, but the time savings is a DIRECT correlation to cost savings...

• Advantage of Ribbon Cable
  • More advantageous for network owner to deploy ribbon based cable and specify ribbon splicing, as ribbon splicing requires fewer splices

• Labor Saving Advantage of Ribbon
  • More advantageous for contractor to have ribbon based cable installed and utilize ribbon splicing to reduce the amount of time/labor to complete the splicing
Advantages of Splicing Fiber Optic Ribbon Cable

Termination Advantages

A few additional termination advantages when deploying ribbon based cable compared to loose tube or tight buffer cable constructions...

90% Savings using Ribbon Based Cables!

*Not to even mention the space savings as well which correlates to a dollar savings too!!

*144ct fiber splicing scenario
Loose Tube or Tight Buffer

*144ct fiber splicing scenario
Ribbon Based Cable
Advantages of Standard Fiber Optic Ribbon Cable

Termination Advantages

What if the application requires termination to single fiber based connectors, such as LC connectors? Isn’t it better then to have loose tube or tight buffer cable construction?

12ct Ribbon to LC Fan-Out

Fusion splice ribbon based cable to 12ct ribbon to LC fan-out

Yesterdays Connectivity Options

Connectivity of Yesterday

First there was the labor intensive Puck & Polish, then Pigtails which required splice trays and then Mechanical Connectors which had index matching gel issues...

Puck & Polish Connector
- Labor Intensive
- Blind Results
- Totally Technician Dependent
- Yield??

Mechanical Connectors
- Expensive
- Blind Results
- Index Matching Gel

Pigtails (w/Splice trays)
- Expensive
- Additional space required
- Factory polished connector
- Requires Technician to pre-fit pigtail in splice tray
Todays Connectivity Options for Optical Fiber

Connectivity of Today

Fusion splicing of individual fibers is faster, easier, not dependent on technician, known results...
Splice-on Connectors provide the greatest in speed and accuracy, reliability for todays/future networks

Splice-on Connectors solves the problems of yesterdays connectors...
- No Blind Splicing
- Factory Polished End Face
- No Index Matching Gel Issues
- Technician Independent
Lynx2 CustomFit® SOC’s

**Splice-On-Connectors**

- Fast, reliable, no index matching gel, fusion splicer provides much higher yields... for all connector types

- Kevlar strength members attached to the housing provide excellent pull out strength without pulling back on ferrule
- Fast and exact lengths achieved on-site without the problems of slack
- Instant splice loss feedback
- Factory ferrule and fiber bond
- Removes the technician judgment call inherent in mechanical splice technology
What if the application requires termination to single fiber based connectors, such as LC connectors? Isn’t it better then to have loose tube or tight buffer cable construction?
### Connectivity Options for Fiber Optic Ribbon

**1st Option Breakout Kits**

What if the application requires termination from ribbon to single fiber based connectors, such as LC connectors?

<table>
<thead>

7. Conclusion – Review of Benefits
Ultra High Fiber Count Cable Overview

It’s not just about making a cable with more fiber, it’s about making a cable with a lot more fiber that can still work in existing conduit pathways.

By utilizing the combined technology of pliable ribbon and bend insensitive fiber (such as G657A1) high fiber count cables can be designed to improve utilization of existing cable pathways.

Ultra High Fiber Count Cable Advantages

- **Ultra High Fiber Count Cable**
  - UHFC design utilizing the combination of pliable ribbon and bend insensitive fiber gives higher packing density to achieve cable with 2X+ fiber capacity within same duct space.

- Additionally, the UHFC/pliable ribbon based design allows for identical termination advantages as presented earlier with standard ribbon based cable constructions.

- **1728ct UHFC OSP Rated Cable**
  - OD ~1.0in. (25.6mm)
  - Allowable Duct = 1.5”

- **1728ct LTR OSP Rated Cable**
  - OD ~1.34in. (34mm)
  - Allowable Duct = 2.0”

- **864ct OSP Rated Cable**
  - OD ~1.0in. (25.6mm)
  - Allowable Duct = 1.5”
